

The Milken Institute was not included in our original survey (it was excluded based on having had only 1% of the total cites to all think tanks in the Ruble study of 1997-1999). Since that time, however, the Milken Institute's resident economists have gained in press visibility, and merit examination. Following our methodology, we found a total of 111 cites for the Milken Institute's 20 listed scholars. This total would have placed the Milken Institute in 10th place (just one cite above ESI with 110 cites and below CBPP with 182 cites) out of the seventeen think tanks ranked based on total cites. The Milken Institute's cites per economist for the five-year period would have been 5.5. Based on total cites per fellow, Milken scholar William Frey would have made the Thirty Highest-Ranking Scholars list. Frey had a total of 50 cites, which would have placed him in the number 24 position (based on our updated/corrected results).

Milken Scholars Citations Totals

July 1 1997-June 30 2002

Updated/Corrected February 15, 2003
